SINGLE EARLY TULIPS

All Single Early Tulips bloom two weeks ahead of the Darwins. Their early blooming date makes them extra showy in the garden. They also have a longer blooming period than later-flowering Tulips, due to the fact that the weather is cooler earlier in the season. Since they grow only about 15 inches high, they can stand the weather better than taller varieties. They can be used in the border to give a very colorful effect if they are planted in groups of six or more of the same color. For these reasons the Single Early Tulips are constantly increasing in popularity with the gardening public.

HARDY GARDEN

Lilies

LILIAM candidum (Madonna Lily). Differing from other Lilies, it is best planted in September. Since it is a base-rooting Lily, it need not be planted as deep as the stem-rooting kinds. The bulbs should be covered with 2 to 3 inches of soil. When planting, place a few handfuls of sand underneath each bulb. The bulbs will make 6 or 8 inches of top growth in the fall. After the ground is frozen, cover the tops with salt hay. Jumbo bulbs, 75c each, \$8.00 per doz. Regular size, 40c each, \$4.50 per doz.

LILIAM regale (Regal Lily). White with the outside of the blooms shaded purple. Plant in October and November. Blooms in July. Grows 4 feet high. Plant bulbs 6 inches deep. Jumbo bulbs, 35c each, \$3.50 per doz.

LILIAM speciosum magnificum. Pink blooms spotted with crimson, resembling an orchid. Grows 5 feet tall; blooms in August and September. Since Speciosum is a stem-rooting Lily, it should be planted 8 to 9 inches deep, with a few handfuls of sand underneath each bulb. For striking effects plant in groups of three to five with masses of white phlox. 65c each, \$6.95 per doz.

SPECIAL NOTE on *L. speciosum*: Since *L. speciosum* does not arrive until late November or early December, we suggest that you dig the holes for these Lilies in advance, before the soil freezes. Fill the holes with salt hay. When the Lilies are delivered, you will not be confronted with the planting problem should the ground be frozen.

RODENT CONTROL. Protect your new bulb plantings from moles, mice, and rats by treating them with arsenate of lead paste before planting. Mix arsenate of lead with water to the consistency of a pudding. Dip bulbs into this solution at time of planting. Lb. 60c, 4 lbs. \$1.60.

DUTCH IRIS

Lovely both in the garden and as a cut flower, these delicate-looking Iris belie their looks, for they can endure winter weather and need little care. For something different and altogether beautiful try some Dutch Iris. Plant 4 to 5 inches deep. They may be grown indoors as well as outdoors.

Golden Harvest. Golden yellow; fragrant. 95c per doz., \$6.00 per 100.

Imperator. Dark purple-lilac. 95c per doz., \$6.00 per 100.

White Excelsior. Pure white; fragrant. 95c per doz., \$6.00 per 100.

WEDGWOOD IRIS

Mostly grown indoors although they are hardy and can be planted outdoors. The two-tone blue color gives it a rich appearance. May be had in bloom under glass in February. They prefer to be forced slowly in a temperature not over 60° F. Grows 2 feet tall. \$1.80 per doz., \$12.00 per 100.

DUTCH IRIS

HYACINTHS

Blooms in Late April Rich in Fragrance

Hyacinth bulbs should be spaced 10 inches apart and planted 5 to 6 inches deep. Ideal for the formal garden, they also can be planted informally in groups in the perennial border or in the foreground of the shrub border. They will scent the spring garden as no other early-flowering plant can do.

BULBS You Can Flower Indoors

HELPFUL HINTS

Bulbs of Paper-whites, Soleil d'Or, and the Chinese Sacred Lily are set in bowls, with white pebbles to hold them in place. No drainage is necessary. Rain-water or distilled water is a great help in growing them successfully. Store the bulbs in a cool, airy, dark place for ten days. The bulbs grow best in a sunny room with a temperature not over 65° F. A plant-food tablet for every six bulbs every two weeks during the growing period will give the bulbs a lift. Paper-whites usually bloom in seven to eight weeks. Chinese Sacred Lilies take a little longer, and the Soleil d'Or Narcissus require nine to ten weeks.

Lily-of-the-Valley pips are the easiest of all to grow. Plant 15 pips in a 7-inch bowl that is at least 5 inches high. No drainage is needed. Set them in moist sphagnum moss, packed firmly, allowing the pips to protrude above the moss. Place directly in a room temperature of 65° F. and in partial shade until leaves and spikes are well developed; then admit full light gradually and increase the temperature to 75° F., if possible. Usually about 25 days are required to bring the pips into bloom.

AMARYLLIS

Plant one bulb in a 6-inch pot in soil mixture as illustrated below. Allow about one-fourth of the bulb to protrude above the soil level. Keep in a moderately cool dark place for about four weeks; then bring them to a sunny window. Water in proportion to the amount of growth and remember that like all other indoor bulbs these flowers need a moist, cool atmosphere rather than an over-heated one. 90c each, \$10.00 per doz.

McArdle's has a complete line of Modern Lawn Care Products. Years of experience in lawn care have taught us the value of quality seeds, properly mixed and sown in well-prepared soil.

McArdle's Fall Program for Crabgrass Infested Lawns

1. Mow lawn as close as possible. Rake, then mow again. Repeat this operation once again.
2. Give the lawn a spike rolling.
3. Feed generously with lawn fertilizer.
4. Sow lawn seed, 3 to 4 lbs. per 1000 sq. ft.
5. If possible, keep lawn moist to hasten germination and seedling growth.

Plant White Clover with Grass Seed

For sunny locations we recommend using 5 to 10% White Clover in a grass seed mixture. It stays green in dry weather and it helps to crowd out crabgrass. For best results use the new Wild White Clover, which is more compact and much more durable than the Common White Clover.

Wild White Clover. Lb. \$2.25.

Common White Clover. Lb. \$1.60.

Seaside Mixture

A special mixture of hardy grasses for use in the vicinity of salt water. Contains Seaside Bent, Kentucky Blue, Chewings Fescue, Creeping Red Fescue, and Fancy Red Top. Use 1 lb. per 100 sq. ft. Lb. \$1.25, 5 lbs. \$6.00, 25 lbs. \$28.75, 100 lbs. \$110.00.

Gro-Sod. A specific formula for a specific purpose—to feed lawns. Through careful study, F. H. Woodruff & Sons have found that an analysis of 10-6-4 feeds grass properly throughout the growing season. Nitrogen, the fertilizer element

that induces luscious green leaf growth, predominates in this fertilizer. One pound of Gro-Sod is required for each 100 sq. ft. of lawn area, or 500 lbs. per acre. A fertilizer distributor will do an even, economical job. 25 lbs. \$2.70, 50 lbs. \$4.55, 100 lbs. \$7.75.

Winter Rye "The Poor Man's Fertilizer"

Plant in the Fall . . . Turn it under in the spring

To improve the soil in the vegetable garden or in a proposed grass area, the most economical method is to plant a cover crop of Winter Rye. When turned under in the spring, it incorporates green manure into the soil, thereby improving the physical condition of the soil. Use 1 lb. per 200 sq. ft., or 2 bus. per acre. Lb. 10c, 1/2 bus. \$2.75, bus. (56 lbs.) \$5.25, 5 bus. \$25.00.

Scotts Turf Builder

Supplies all the needed elements in correct proportions for feeding grass and trees. Just before sowing seed apply Scotts Turf Builder. This special grass food does not harm seed so it is not necessary to delay seeding. In constructing a new lawn, distribute 20 lbs. of Turf Builder per 1000 sq. ft. and rake it into the top 2 or 3 inches of soil. Use just half this amount, 10 lbs. per 1000 sq. ft., when feeding an established lawn. Care should be used to make application only when the grass is dry. An abundant supply of the right type of nourishment not only encourages old grass to spread out and take a new lease on life but it also insures healthier and more vigorous growth of new grass.

CHINCH BUGS under glass, magnified seven times. Chinch bugs attack grass by piercing their tiny beaks into the grass stems to suck out juices. The grass wilts, then turns brown. Chinch bugs are active in full sun only. Unless their activities are checked, they will eventually destroy large patches of turf. They are especially active in hot, dry weather from early June until frost. Use Scotts Pest Control to kill these insects.
